OTHERS

SentryBay software replaces the actual keystrokes with fake random keys which the keylogger malware receives – displayed as a “data scrambler” to demonstrate the protection provided

Unprotected End Users

Man-in-the-Browser

Malicious browser extensions can be loaded which interact with the web session

Man-in-the-Middle

Attacker relays and intercepts communications to a non-trusted destination

Malware on Endpoint

Keyloggers and Screen Capture malware intercept and exfiltrate banking credentials and payment details

Protected End Users

Man-in-the-Browser

Armored Client blocks 3rd party extensions, developer tools and APIs from interacting with the browser session

Man-in-the-Middle

Armored Client checks Certificate issuers against whitelisted domains to block MitM attacks

Malware on Endpoint

Armored Client blocks data being captured by keyloggers and screen scraper malware on the endpoint

SentryBay Management Portal

The MSP Admin is also an Admin of each Customer setup in the Portal.

The Customer can also have their own Admin to perform the same configuration customisation tasks, such as changing the browser URLs, whitelist etc.

Security that works
